

#### Language Patterns in **International Relations**

Leah Windsor, Ph.D. Languages Across Cultures Lab **Institute for Intelligent Systems** April 9, 2019

THE UNIVERSITY OF MEMPHIS.

## How does what we say reveal who we are?

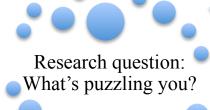

Is it what we say, or how we say it?

What biases influence our understanding of international relations?

# How we learn about the world through text analysis

Data Generating Process/Corpus Identification

In what language? With what tools?

Theoretical framework: What informs your research question?

What sources inform theory?

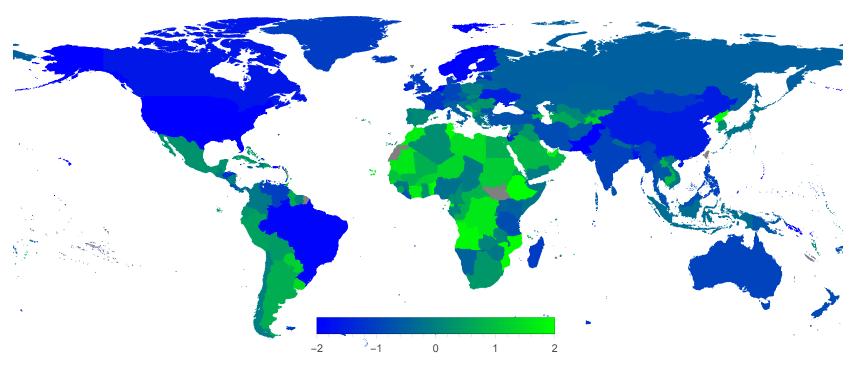

Feature selection based on theoretical expectations

#### Language shows country-level differences

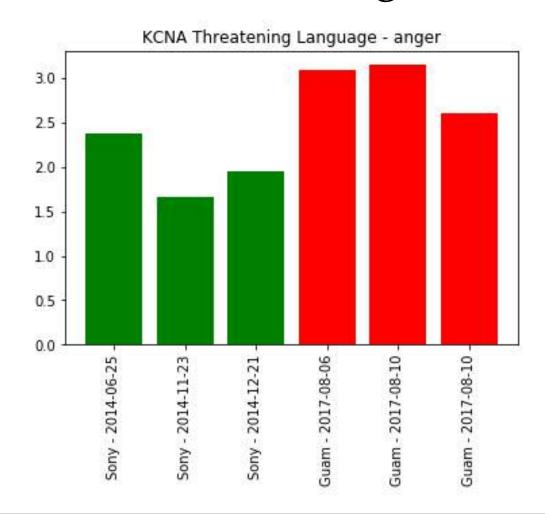

#### Average Std. Formality by Country

Windsor, L. (February 2017) *The Predictive Power of Political Discourse*. White Paper. National Academy of Sciences. Washington, DC.

## Learning about politics from words: Forecasting

## Learning about politics from words: Hard-to-observe groups

Stayed in Power

King Hamad bin Isa Al Khalifa (Bahrain)

King Abdullah
(Jordan)

> Bashar al-Assad (Syria)

King Mohammed VI (Morocco)

Abdullah bin Abdulaziz Al Saud (Saudi Arabia)

More positive emotion words, and fewer negative emotion, anxious, and anory words

Lost Power

Twice as many negative emotion words, more risk-associated words, and more third-person pronouns

Zine al-Abidine Ben Ali(Tunisia)

Muammar Gaddafi (Libya)

Ali Abdullah Saleh (Yemen)

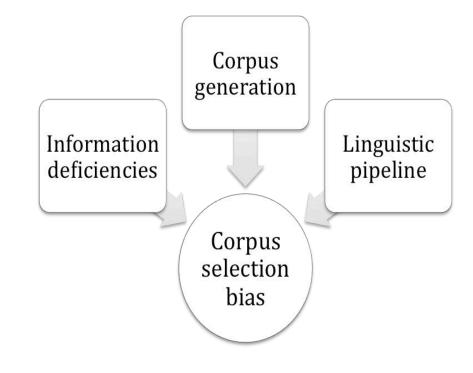

> Hosni Mubarak (Egypt)

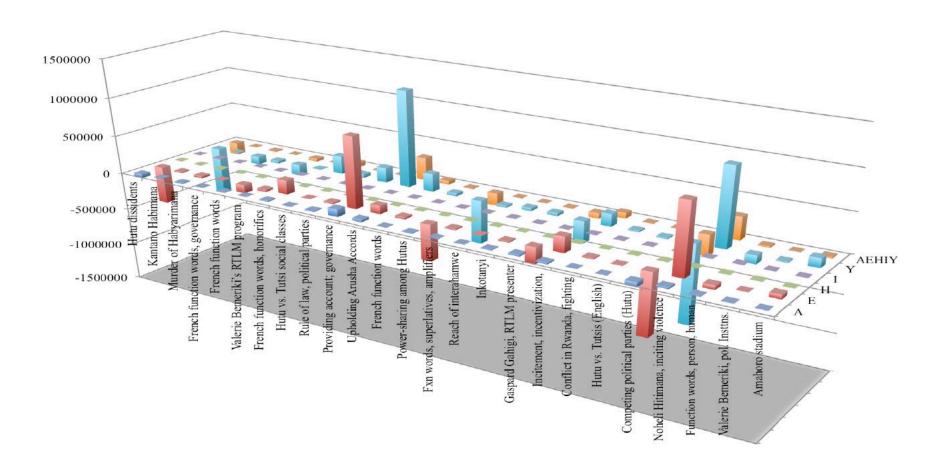

#### Sources of Bias in Text-as-Data

- How do we learn about political processes in opaque societies and extremist groups?
- How do we know what we know about the world?
  - Sources describe events and ideas differently based on language, culture, geography, etc.
- Research about language and politics broadly has deficiencies which affect conclusions and generalizability of findings, including:
  - Information deficiencies
  - Document processing
- Why it's important to dig and work for broader source texts
  - Relatively few groups and regimes dominate policy space
  - Generalizability, via multilingual computational tools

# Topic Modeling: Insights on the Rwandan Genocide

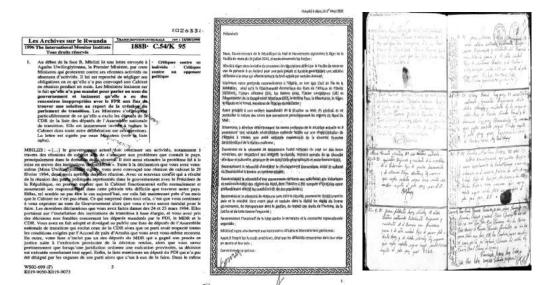

# De-biasing Linguistic Analysis: Document Processing

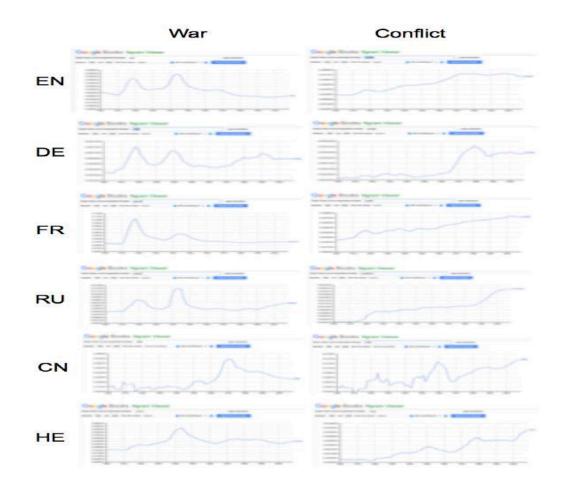

- Archived in userunfriendly formats
- Automated document processing technology exists but requires laborintensive human supervision
- Linguistic and translational barriers
  - Some "bag of words" programs are languageagnostic, such as topic modeling
  - Windsor et al., (under review) finds very small effect sizes for dictionarybased programs between human and computertranslated documents

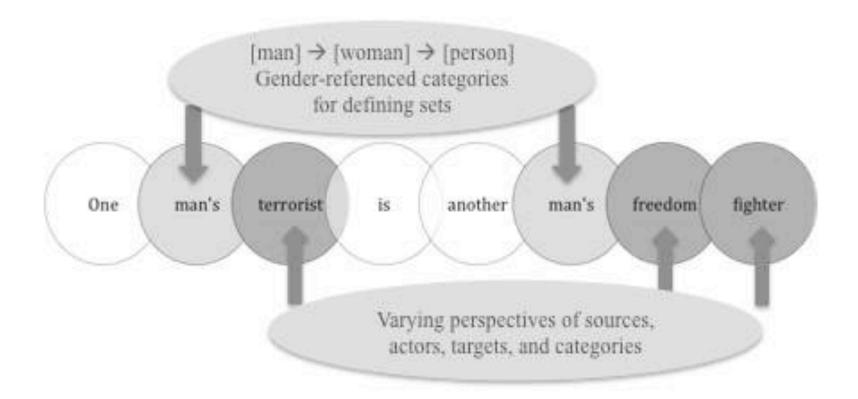

## Language and culture shape how we see the world (What we say reveals who we are)

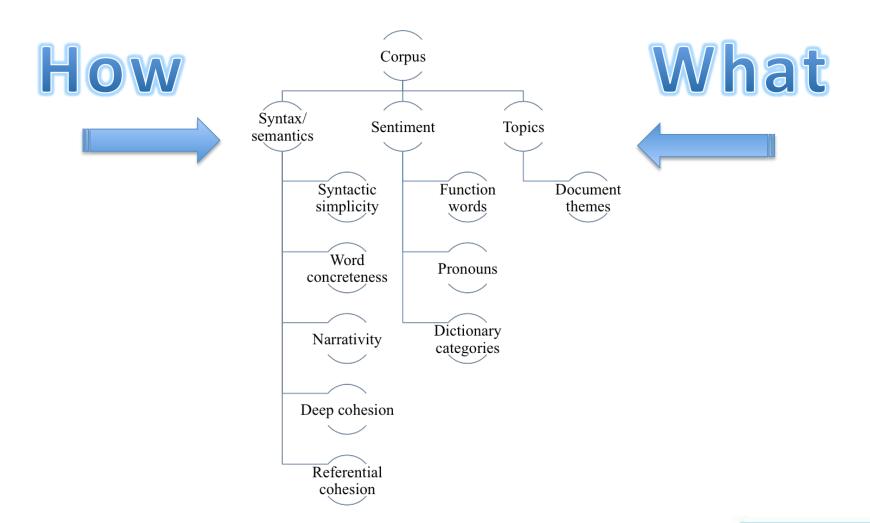

## Culturally Implicit Associations: Differing Perspectives on the Same Phenomenon

#### It's what you say \*and\* how you say it

### Syntactic simplicity/complexity

#### connor @connorhannigan4

text: i can't

email: i cannot

essay of 2000 words: i am unable

to can

### Word concreteness/abstractness

"China will enhance friendly relations and cooperation with all other countries on the basis of the Five Principles of Peaceful Coexistence and strive to build a new type of relations between major countries based on mutual respect and win-win cooperation. Following a policy of building good-neighborly relationships and partnerships with neighboring countries, China has actively expanded exchanges with countries in its neighborhood."

-UNGA General Debate, Chinese Representative, 2012

### Narrativity vs. Expository

Therefore, I direct all department secretaries and the heads of agencies to reduce requirements and the processing time of all applications, from the submission to the release. I order all department secretaries and heads of agencies to remove redundant requirements and compliance with one department or agency, shall be accepted as sufficient for all. I order all department secretaries and heads of agencies to refrain from changing and bending the rules government contracts, transactions and projects already approved and awaiting implementation. Changing the rules when the game is on-going is wrong. I abhor secrecy and instead advocate transparency in all government contracts, projects and business transactions from submission of proposals to negotiation to perfection and finally, to consummation.

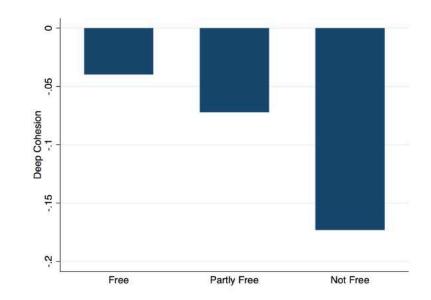

-Rodrigo Duterte, 2016

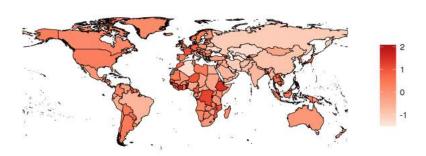

### Deep cohesion

- This dimension reflects the degree to which the text contains causal and intentional connectives when there are causal and logical relationships within the text.
  - These connectives help the reader to form a more coherent and deeper understanding of the causal events, processes, and actions in the text.
  - When a text contains many relationships but does not contain those connectives, then the reader must infer the relationships between the ideas in the text.
- If the text is high in deep cohesion, then those relationships and global cohesion are more explicit.

#### Referential cohesion

"There are moments we can describe as historical turning points, when nations and peoples must decide where they stand. This is one of these moments, when history will judge us as leaders, and examine if we were democratic leaders that represented the will of our peoples. It is clear that the people of the world are taking a stand, against neoliberal economics and war. They are fighting against those who would impose their will by military and economic force. They are resisting those who would undermine and even overthrow the basic principles that founded the United Nations itself."

-UNGA General Debate, Venezuelan Representative, 2004

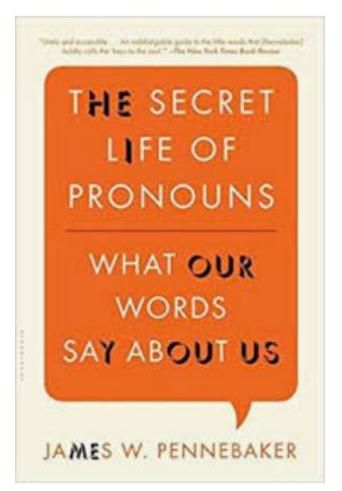

## Sentiment Analysis: Pronouns as language truth-o-meter

"Hey very sorry. Meant no harm. And I apologize for whatever I may have said or what was said. And my overtures are strictly professional. Again I apologize didn't mean to be inappropriate at all. Sorry that impression was left."

-email by Harold Ford, Jr.

### Why function words matter

- UNSC Resolution 242 controversy:
  - Withdrawal of Israeli armed forces from territories occupied in the recent conflict
  - Retrait des forces
     armées israéliennes

     des territoires occupés
     lors du récent conflit.

### Minerva 2018 Project: Capstone and Coh-MetrixML

#### Coh-MetrixML (ML = multi-lingual)

- This program has four major component: base, CoreNLP, WordNet and LSA.
  - The CoreNLP component is responsible for paragraph and sentence splitting, sentence parsing, namedentity recognition and syntax related measures.
  - The WordNet component is responsible for providing word information, such as word lexical type, polysemy, hypernymy, etc.
  - The LSA component is responsible for providing cohesion measures.
- In Chinese, French, Arabic, Spanish, German, and possibly Russian (extending beyond English-only)

#### Coh-MetrixML Advantages

- This program will allow researchers to analyze syntactic and semantic features in the original language.
  - Circumvents translations
  - Broadens the domain of corpora available for scholarly inquiry
  - Maintains fidelity to original intent/meaning of the corpus.
  - Can be aligned with other text processing methods

#### Future directions

- Evaluating systematic biases in language (similar to known identity-based biases in AI) and implications for social and political processes
- Deploying Coh-MetrixML for public use
- Recruiting participation from a broader network of global scholars and multilingual text analysis applications via QuantText
