Dr. Robert G. Angevine Research Staff Member Joint Advanced Warfighting Division, Institute for Defense Analyses

Dr. Angevine is a trained military historian, award-winning author, and experienced strategic analyst. He has spent 17 years developing, executing, and managing projects designed to assist senior decision-makers in the Departments of Defense and Homeland Security assess future strategic environments, identify potential opportunities and challenges, and develop appropriate strategies. He has led research efforts on a broad range of topics, such as the organization of the combatant command system, the role of information in warfare, the challenges of conducting military operations with limited or no access to networked information systems, and new operational, organizational, and training concepts for stability operations. In addition, he has researched and written numerous reports on highly complex subjects, including how to apply the U.S. military's lessons learned effort following the 1973 October War to improve ongoing lessons learned efforts, how to adapt future space architectures to possible foreign counter-space threats, how to respond to the future evolution of international borders, how to improve the U.S. military's ability to adapt to disruption and innovate during protracted conflicts, and how to harness the organizational cultures of the military Services to accelerate innovation.

Dr. Angevine is also an experienced wargamer who has designed and conducted multiple, highly successful wargames for the Department of Defense and the Services. He has also assessed previous wargames in order to identify lessons learned regarding wargaming and the future security environment.

In addition to his work as a contractor for the U.S. government, Dr. Angevine has taught courses in military history and strategic studies to students at George Washington University, George Mason University, American University, and Duke University for over a decade and maintained an active publication schedule.
