

Artificial Intelligence, COVID, and Global Democratic- authoritarian Competition

Dr Nicholas Wright

Intelligent Biology, Georgetown University,
UCL, New America

Upsides of surveillance: To enable the rich industrialized world's social and economic progress over the past two centuries, forms of surveillance were entirely necessary.

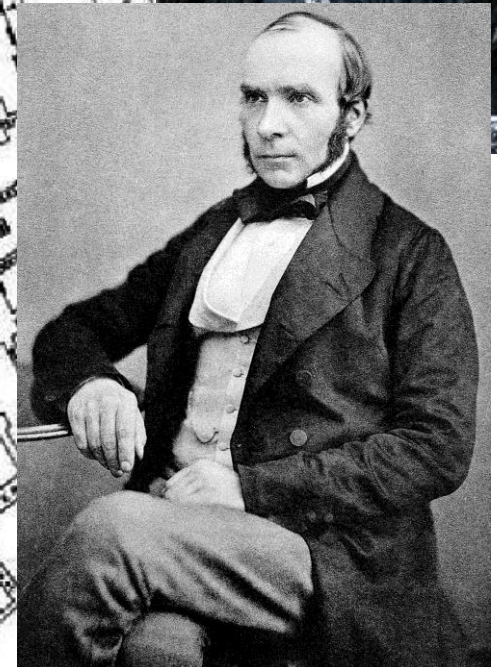

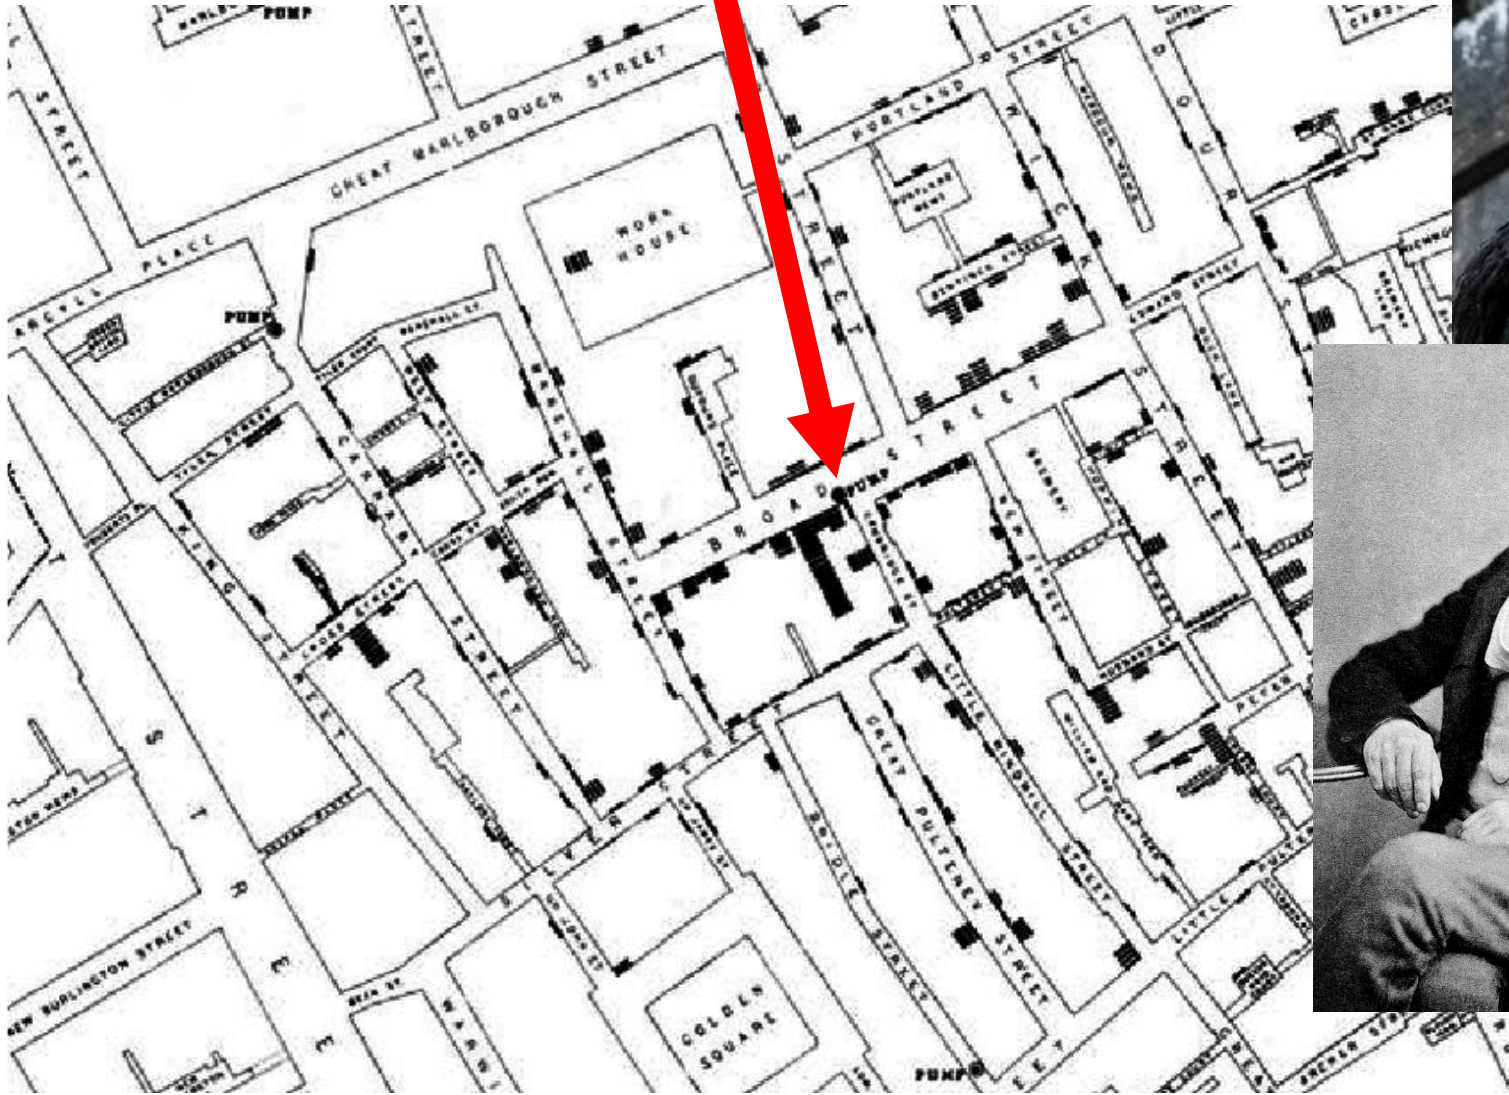

Affordances: The possibilities for action that an actor perceives that their environment or tools present to them.

e.g. ipads or kindles... hammers... capabilities create intentions... choices...

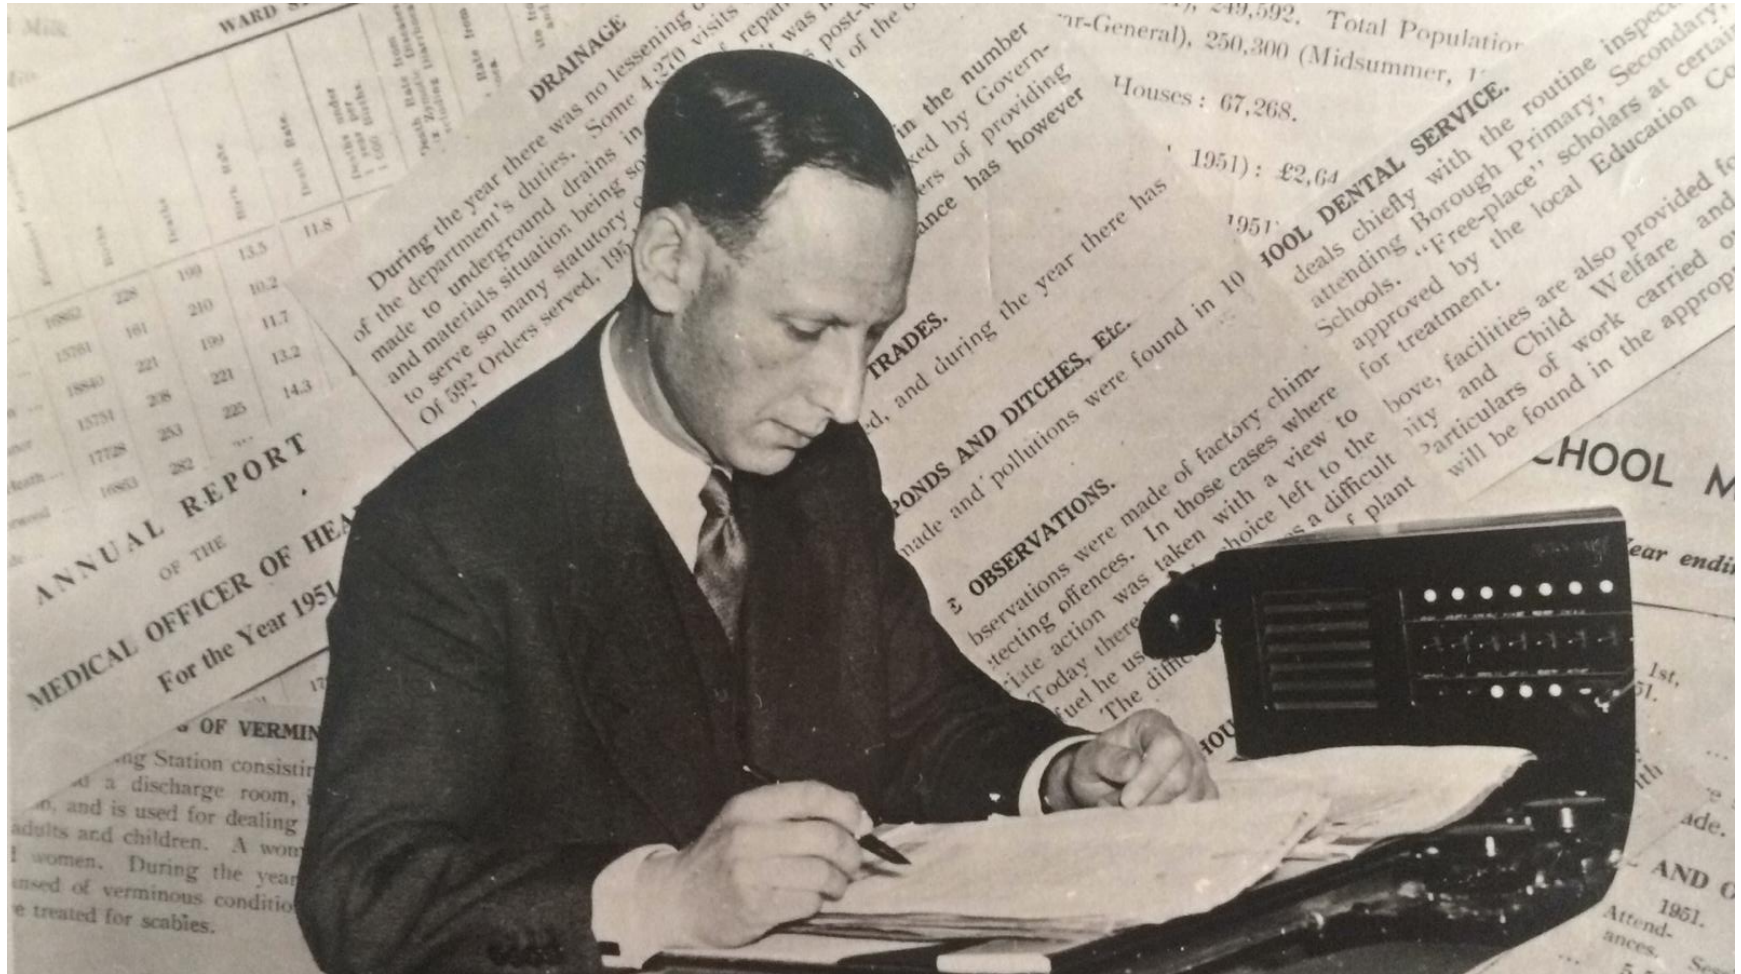

Central question: How to establish democratically accountable rules and norms that provide as much of the upside of AI-supported surveillance as possible, **without** creating technological affordances that could facilitate authoritarian concentrations of power.
